

UniFlow

AIR CHUTES

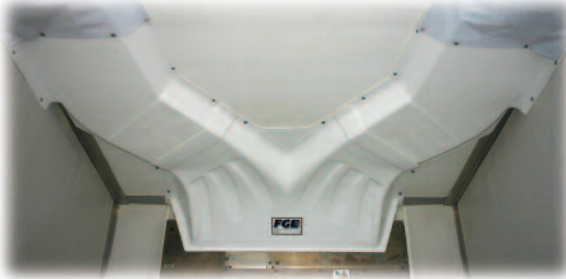

ENSURE PROPER TEMPS

FG's Uni-Flow Air Chutes are designed to provide uniform temperatures throughout the entire trailer. The unique diverter evenly distributes air to each side chute, guiding the air to the rear of the trailer for full-length circulation.

*The Uni-Flow Air Chute system features two durable vinyl chutes located in the upper corners of the trailer. This design not only **improves airflow**, but **minimizes loading damage** common to center mounted air chutes.*

*The Uni-Flow Chute system features a **USDA Approved Food Grade Surface** to help maintain a safe environment inside the trailer.*

◀ Durable, rigid polyethylene transition sections minimize damage

UNIFLOW ADVANTAGES

- More accurate temperature readings.
- Reduced maintenance costs.
- Easy removal for unit access.
- Design fits most refrigeration units.
- Low profile chutes and transitions.
