

Uni-Flow

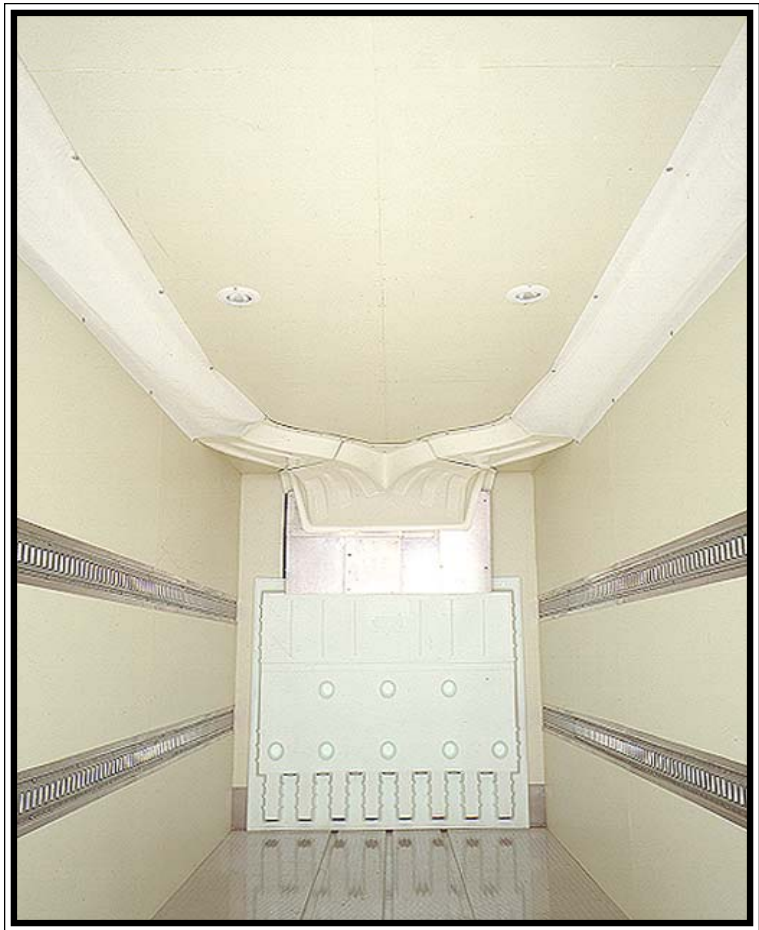

Air Chutes

Ensure Proper Temps

FG's **Uni-Flow Air Chutes** are designed to provide uniform temperature throughout the entire trailer. The unique diverter evenly distributes air to each side chute. The side chutes guide the air to the rear of the trailer for full-length circulation.

The Uni-Flow Air Chute system features two durable vinyl chutes located in the upper corners of the trailer. This design not only **INCREASES AIRFLOW** down the trailer, but **ELIMINATES LOADING DAMAGE** common to center mounted air chutes.

All components of the Uni-Flow Air Chute System feature a **USDA APPROVED** Food Grade Surface to help you establish a safe environment inside your trailers.

Uni-Flow Air Chute Advantages

- ◆ ELIMINATE LOADING DAMAGE
- ◆ INCREASED AIRFLOW
- ◆ REDUCED MAINTENANCE COSTS
- ◆ REDUCED DOWN TIME
- ◆ UNIVERSAL DESIGN FITS MOST REEFER UNITS
- ◆ USDA APPROVED SURFACE

➡ Chute design enables bulkheads to seal off rear compartment while still allowing airflow to the front

⊙ Durable, rigid transition sections minimize damage
