

# Truck Strip Door

## SC-TSD-UM

1. Installation of the mounting bar varies depending on type of rear door. With swing doors, the mounting bar can be attached to the ceiling or to the header.

With a roll up door, the mounting bars must be installed with additional brackets. Begin by mounting the brackets to bar. Once completed, attach the mounting bar with brackets to sidewall.

2. Next, place the strips on the studded hardware.

For **8" wide strips with 50% overlap**, hang the first strip to the far left, skip 4", hang the second strip, skip 4" and repeat. Center the remaining strips over the 4" gaps.

3. After the strips are installed, place the retaining bars over the studs and secure in place with the supplied nuts and lock washers.
